

# EXTREMELY PROMISING – SECURE FUTURE PROSPECTS IN LUSATIA

**i** The structural transformation is intended to secure a future full of opportunities for generations of people in Lusatia. This is based on growing economic strength, the establishment of companies in future-oriented sectors, and the development of new technologies.

**i** To make this vision a reality, education providers, companies, and public stakeholders are joining forces. They are creating networks, modern learning environments, and attractive conditions to ensure that skilled workers remain in the region or are attracted to it.

The €10.3 billion that the federal government is providing to the Brandenburg region of Lusatia forms the basis for making the transition socially just, economically strong, and regionally manageable. It is the foundation for a genuine future to emerge from the coal phase-out – visibly on the ground and effectively impacting people's everyday lives.

## STRUCTURAL DEVELOPMENT LUSATIA

The campaign “Lusaia. Awesome Area.” makes the new beginning and dynamic change of the Lausitz visible.

All updates can be found on the website [www.krasse-lausitz.de](http://www.krasse-lausitz.de)

Lusatia is beginning an unprecedented transformation into Europe's model region for climate action and sustainable growth, with billions invested.
